# Sample IT Procedure: Checking Disk Space on Windows

Document ID: OPS-SOP-001 | Version: 1.0 | Sample training document

## 1. Purpose

This procedure describes safe, read-only ways to review available disk space on a Windows server or workstation.

## 2. Scope

Use this procedure when investigating a low disk space alert or when checking storage capacity. Follow your organization's change and access procedures before making any changes.

## 3. Check disk space using File Explorer

1. Open File Explorer.
2. Select **This PC**.
3. Review the capacity and free space displayed for each drive.
4. Record the drive letter, total capacity, and available free space.

## 4. Check disk space using PowerShell

Open PowerShell and run the following read-only command:

```
Get-Volume | Select-Object DriveLetter, FileSystemLabel, Size, SizeRemaining
```

The command displays drive letters, volume labels, total size, and remaining space. It does not modify disks or files.

## 5. What to record

- Server or computer name.
- Drive letter showing low space.
- Total capacity and free space.
- Date and time of the observation.
- Relevant alert or incident reference, if applicable.

## 6. Important precautions

This procedure is for checking information only. Do not delete files, resize partitions, extend volumes, or change monitoring thresholds without the required approval and an authorized change process.

End of sample procedure. This document is fictional and intended only for testing the OpsPilot learning project.

OpsPilot updated document testing: This SOP was revised on 2 November 2026.
